## PORTFOLIO

### NexGen — Home Automation Solution ([Repo Link](#))

This is a solution I built to manage all the electronic appliances inside my house from anywhere in the world using a single tap. This was developed using ESP8266 Microcontroller and Relays. I also developed multiple home automation technologies with different modes of connectivity features and was commercially named as “Nexgen”.

### mKhan Web — Personal Profile Gallery ([Web Link](#))

I always had an obsession with building websites which led to the current “[mkhan.ml](#)” a personal static website developed mainly to share my works and skills with my freelancing clients.

### JKOBS — Online Bidding System ([Web Link](#))

This was a simple e-Auction website developed using PHP,HTML and JS. This was my mini project submission for my degree course and I made it public under my website.
